

## Submission on Smart Specialisation Strategy – Councillor Joe Sheridan

### Smart Dissemination & Diffusion

The green , social and ethical development of a vibrant smart dissemination and educational smart economy needs to be targeted at the grass root thru out the state .This will enable community's in niche development of their own strategic goals and visions Our children are the leaders of tomorrow's world and where best to engage that but in their own communities , not schools because the process would become an exercise and not a progression of ideas .

We now have 200 connected Hubs across the state with a doubling before year end.

These community and enterprise spaces present a growth and sharing space to develop a new digi wave amongst our youth.

The connected hubs platform is an existing launch pad and with tweaking and targeted resources can propel these youthful smart seeds into rooting and growth in their own communities.

It's about connected dots ..... all it takes is the vision and leadership to want to excel.
